**THE ORIGINAL MODULAR FRAMEWORK SYSTEM**

T3 Frame is the original modular framework system. Its patented modular, twist lock assembly makes it one of the most versatile and innovative display systems in the world. It allows users to create complex displays in a fraction of the time of other frameworks and without the need for tools or levers. Its wide range of profiles and extrusions allows for unmatched design potential.

THE REVOLUTIONARY 360° L.E.D TUBE LIGHT

With its patented lightweight, unbreakable and portable design it is one of the most versatile lights available in the display and exhibition industry. It emits a bright, white 360° light and is easily installed into any type of structure, all this adds up to it being the ideal lighting solution.
At the forefront of visual and product displays. Its twist-lock assembly method and modular design allows for it to be built in a matter of minutes and packed into one of our compact, wheeled travel cases easily. Profiles can be cut to any length, meaning there is complete versatility when it comes to size of a display.
The innovative concept of T3 Easycube allows for strong and lightweight structures to be created that can be used individually or in “bundles”. The structures are created using modular plastic profiles and units are comprised of counters, plinths and towers of varying sizes that can all be relocated and locked together. This allows for an almost unlimited number of designs and orientations of display.
